MassBloc® walls find a role in water-sensitive urban design

The increasing popularity of bio-retention basins in water-sensitive urban design has created a new role for the **MassBloc® earth retention system**.

A MassBloc® retaining wall was recently deployed in the construction of a bio-retention basin on the edge of a new residential development, Fernbrooke, at Redbank Plains south-east of Brisbane.

Rocla introduces new pole range for high voltage transmission market

In late 2008, Rocla developed a new product range to service the high voltage transmission line market. The new range, dubbed **Rocla Strong Poles (RSP)** has been a great success, with orders to date in excess of a million dollars.

Our customers are pleased to have this new product as it means they no longer have to source them from overseas - thereby achieving significant savings of time and costs.
