Australian War Memorial goes green with ecoRain®

A Rocla **ecoRain® rainwater utilisation system** has been incorporated into the upgrade of the iconic Australian War Memorial in Canberra.

The ecoRain30™ system was installed underground, behind the excavated carpark. Sound structural capacity and design flexibility made the ecoRain® system ideally suited to this application.

Rocla MassBloc® permeable retaining wall system

The Rocla MassBloc® system is an **economical earth** retention structure that is quick to install. Precast permeable concrete blocks, each weighing around 1.8 tonnes, are interlocked by a nib precast into the back of the block. The nib holds the blocks in place, while also providing the set-back for each course. Construction is mortarless and an experienced crew can place up to 70 square metres of wall a day. To specify a solution, click here to download the **Rocla MassBloc® Design Software.**
